

DeLurgio

O R T H O D O N T I C S

WHY DO YOU LIKE THIS SMILE?

Here at DeLurgio Orthodontics we consider these things:

- Smile Arc
- Full Buccal Corridors
- Full Visual Incisor Display
- Gingival Display
- Esthetic Flow

What is it?

Smile Arc Protection brackets are placed more gingival (closer to gums) than traditional brackets resulting in a beautiful curved smile line and increased tooth display.

- Improved Facial Esthetics
- Creates Youthful Hollywood Smile
- Beautiful Broad Smile Follows Curvature of Lower Lip
- Reduce Flaring of Front Teeth
- Reduces Dark Corridors in Corners of Mouth
- Improves Performance of the Appliance

Smile Arc is when the edges of your top teeth follow the curve of your lower lip. The ideal Smile Arc has full teeth display with curvature parallel to the curvature of the lower lip as shown here.

A **straight flat** smile line is less pleasing. A reverse curve where the front teeth appear to be shorter than the canines gives a look of aging and wear and can be quite unattractive.

BEAUTIFUL BROAD SMILES WITH SAP
